Chapter 24: Measures of Central Tendency (Mean, Median, Quartiles and Mode)

Step-by-step solutions to the previous year questions

The question numbers match the PYQ question sheet.

1 Mean of raw and tabulated data

1. Assertion (A): The mean of the first 9 natural numbers is 4.5. Reason (R): Mean = $\frac{\text{sum of all the observations}}{\text{total number of observations}}$. (a) A true, R false (b) A false, R true (c) both true, and R is the correct reason for A (d) both true, but R is not the correct reason for A **ICSE 2025, 1 mark**

SOLUTION

$1 + 2 + \dots + 9 = 45$, so the mean is $\frac{45}{9} = 5$, not 4.5. A is false.

R is the correct formula for the mean.

Answer: (b)

2. For the data below, find (a) the mean, to the nearest whole number (b) the median.

ICSE 2025, 3 marks

x	10	11	12	13	14	15	16
f	3	2	2	6	3	5	3

SOLUTION

(a) $\sum f = 24$ and $\sum fx = 30 + 22 + 24 + 78 + 42 + 75 + 48 = 319$. Mean = $\frac{319}{24} \approx 13.29$, which is 13 to the nearest whole number.

(b) Cumulative frequencies: 3, 5, 7, 13, 16, 21, 24. With $n = 24$ (even), the median is the mean of the 12th and 13th values.

Values 8 to 13 are all 13, so the 12th and 13th values are both 13.

Answer: (a) mean = 13 (b) median = 13

2 Mean of grouped data

3. The table gives the running times of some films. Find the mean running time by the step-deviation method. **ICSE 2024, 3 marks**

Duration (minutes)	100–110	110–120	120–130	130–140	140–150	150–160
Number of films	5	10	17	8	6	4

SOLUTION

Class marks: 105, 115, 125, 135, 145, 155. Take $A = 125$ and $h = 10$, so $u = \frac{x - 125}{10}$ is $-2, -1, 0, 1, 2, 3$.

$$\sum f = 50 \text{ and } \sum fu = -10 - 10 + 0 + 8 + 12 + 12 = 12$$

$$\text{Mean} = A + \frac{\sum fu}{\sum f} \times h = 125 + \frac{12}{50} \times 10$$

Answer: 127.4 minutes

3 Median of raw data

4. The numbers 27, 31, 46, 52, x , $x + 4$, 71, 79, 85, 90 are in ascending order and their median is 64. Find x . (a) 60 (b) 61 (c) 62 (d) 66 **ICSE 2024, 1 mark**

SOLUTION

There are 10 numbers, so the median is the mean of the 5th and 6th: $\frac{x + (x + 4)}{2} = x + 2$.

$$x + 2 = 64, \text{ so } x = 62.$$

Answer: (c)

These questions are based on questions asked in past board examinations. They have been reworded by MathSetu, the figures are redrawn, and the solutions are MathSetu's own. MathSetu is an independent study resource and is not affiliated with or endorsed by CBSE, CISCE, NCERT or any publisher.
