Chapter 3: Shares and Dividend

Daily practice problems: 10 questions with an answer key

Try every question on your own first. The answer key is on the last page.

1. Find the market value of a ₹100 share (i) at par (ii) at a premium of ₹35 (iii) at a discount of ₹12.

2. Find the annual dividend on 250 shares of nominal value ₹20 each when the company pays 8%.

3. How many ₹50 shares, quoted at ₹62.50, can be bought for ₹10,000?

4. A man invests ₹9,600 in ₹100 shares at ₹80. If the company pays a dividend of 18%, find the number of shares, his dividend and his percentage return.

5. A company declares a dividend of 9% on its ₹100 shares. What is the market value of a share if an investor earns 12% on his money?

6. Find the rate of dividend if ₹25 shares quoted at ₹40 give a return of 5%.

7. Which is the better investment: 12% ₹100 shares at ₹120, or 8% ₹100 shares at ₹90?

8. A man buys 500 shares of ₹10 each at a premium of ₹2. Find his investment, and his dividend if the company pays 15%.

9. A man sells 100 shares (N.V. ₹50) at ₹60 each and buys ₹100 shares at ₹125 with the proceeds. How many shares does he buy?

10. How much should a man invest in ₹50 shares selling at ₹60 to obtain an annual income of ₹450, if the rate of dividend is 10%?

Answer Key

1. (i) ₹100 (ii) ₹135 (iii) ₹88
2. $250 \times 1.60 =$ ₹400
3. 160 shares
4. 120 shares; ₹2,160; 22.5%
5. $9 \times 100 = 12 \times \text{M.V.}$, so M.V. $=$ ₹75
6. $r \times 25 = 5 \times 40$, so $r = 8\%$
7. Returns are 10% and $8\frac{8}{9}\%$; the first
8. Investment ₹6,000; dividend ₹750
9. Proceeds ₹6,000; 48 shares
10. 90 shares needed; investment ₹5,400
