Chapter 15: Similarity (With Applications to Maps and Models)

Step-by-step solutions to the previous year questions

The question numbers match the PYQ question sheet.

1 Similar triangles

1. $\triangle ABC \sim \triangle EFG$ with $\angle ABC = \angle EFG = 60°$, $AB = 15$ cm, $BC = 3$ cm and $EF = 75$ cm. Find FG.
(a) 15 cm (b) 20 cm (c) 25 cm (d) 30 cm ICSE 2025, 1 mark

SOLUTION

Corresponding sides are proportional: $\frac{AB}{EF} = \frac{BC}{FG}$.

$\frac{15}{75} = \frac{3}{FG}$, so $FG = 15$ cm.

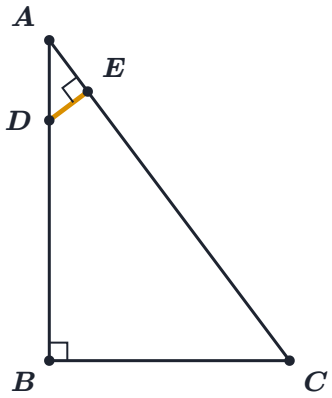

Answer: (a)

MathSetu

2 Maps and models

2. In $\triangle ABC$, $\angle ABC = 90^\circ$, $AB = 20$ cm and $AC = 25$ cm. D is a point on AB and E is a point on AC with $DE \perp AC$ and $DE = 3$ cm. (a) Prove that $\triangle ABC \sim \triangle AED$. (b) Find BC, AD and AE. (c) $BCED$ is a plot of land drawn on a map, and its actual area is 576 m². Find the scale factor of the map.

ICSE 2025, 4 marks

SOLUTION

(a) In $\triangle ABC$ and $\triangle AED$: $\angle A$ is common and $\angle ABC = \angle AED = 90^\circ$. So $\triangle ABC \sim \triangle AED$ (AA).

(b) $BC = \sqrt{25^2 - 20^2} = 15$ cm. From the similar triangles, $\frac{AB}{AE} = \frac{BC}{ED} = \frac{AC}{AD} = \frac{15}{3} = 5$.

$AE = \frac{20}{5} = 4$ cm and $AD = \frac{25}{5} = 5$ cm.

(c) Area of $BCED$ on the map $=$ area of $\triangle ABC -$ area of $\triangle AED = \frac{1}{2} \times 20 \times 15 - \frac{1}{2} \times 4 \times 3 = 150 - 6 = 144$ cm².

Actual area $= 576$ m² $= 5760000$ cm². $k^2 = \frac{144}{5760000} = \frac{1}{40000}$, so $k = \frac{1}{200}$.

Answer: (b) $BC = 15$ cm, $AD = 5$ cm, $AE = 4$ cm (c) scale factor $1 : 200$

3. A model of a high-rise building is made to a scale of $1 : 50$. (a) The model is 0.8 m high; find the height of the building. (b) A flat in the building has a floor area of 20 m²; find its floor area in the model.

ICSE 2020, 3 marks

SOLUTION

(a) Height of building $= 0.8 \times 50 = 40$ m

(b) Areas are in the ratio $1^2 : 50^2 = 1 : 2500$. Area in the model $= \frac{20}{2500} = 0.008$ m² $= 80$ cm².

Answer: (a) 40 m (b) 0.008 m², that is 80 cm²

4. A model of a building is made with scale factor $1 : 30$. (a) The model is 80 cm high; find the height of the building in metres. (b) A tank on top of the building has a volume of 27 m³; find the volume of the tank on the model. ICSE 2019, 3 marks

SOLUTION

(a) Height $= 80 \times 30 = 2400$ cm $= 24$ m

(b) Volumes are in the ratio $1^3 : 30^3 = 1 : 27000$. Volume on the model $= \dfrac{27}{27000} = 0.001$ m³ $= 1000$ cm³.

Answer: (a) 24 m (b) 0.001 m³, that is 1000 cm³

5. On a map drawn to a scale of $1 : 50{,}000$, a rectangular plot $ABCD$ has $AB = 6$ cm and $BC = 8$ cm. Find (a) the actual length of the diagonal AC in km (b) the actual area of the plot in km². ICSE 2018, 3 marks

SOLUTION

1 cm on the map is 50,000 cm $= 0.5$ km on the ground.

(a) $AC = \sqrt{6^2 + 8^2} = 10$ cm on the map, which is $10 \times 0.5 = 5$ km.

(b) The actual sides are 3 km and 4 km, so the area is $3 \times 4 = 12$ km².

Answer: (a) 5 km (b) 12 km²

3 Conditions for similarity

6. $\triangle ABC \sim \triangle PQR$. AD bisects $\angle BAC$ and meets BC at D; PS bisects $\angle QPR$ and meets QR at S. Which statement is true? (a) $\triangle ABC \sim \triangle PQS$ (b) $\triangle ABD \sim \triangle PQS$ (c) $\triangle ABD \sim \triangle PSR$ (d) $\triangle ABC \sim \triangle PSR$ ICSE 2024, 1 mark

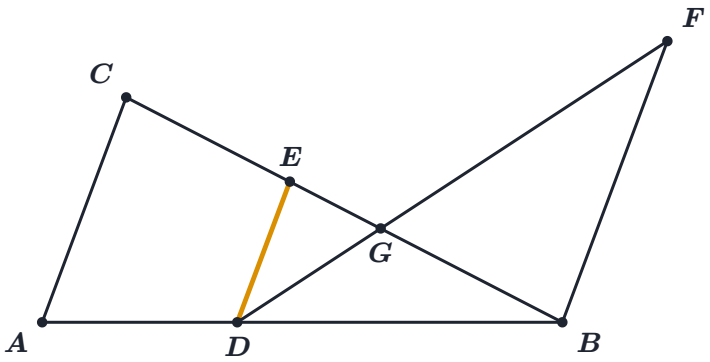

SOLUTION

$\angle B = \angle Q$ and $\angle A = \angle P$ (similar triangles), so $\angle BAD = \dfrac{1}{2}\angle A = \dfrac{1}{2}\angle P = \angle QPS$.

Two angles of $\triangle ABD$ equal two angles of $\triangle PQS$.

Answer: (b)

7. AC, DE and BF are parallel, with D on AB and E on CB. DF meets CB at G. Given $AC = 24$ cm, $EG = 8$ cm, $GB = 16$ cm and $BF = 30$ cm, (a) prove that $\triangle GED \sim \triangle GBF$ (b) find DE (c) find $DB : AB$. ICSE 2023, 4 marks

SOLUTION

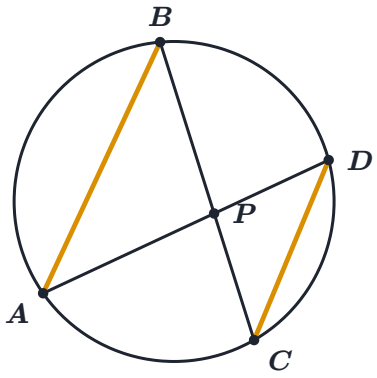

(a) $\angle EGD = \angle BGF$ (vertically opposite) and $\angle GED = \angle GBF$ (alternate angles, $DE \parallel BF$). So $\triangle GED \sim \triangle GBF$ (AA).

(b) $\frac{DE}{BF} = \frac{EG}{GB}$, so $DE = 30 \times \frac{8}{16} = 15$ cm.

(c) In $\triangle ABC$, $DE \parallel AC$, so $\triangle BDE \sim \triangle BAC$ and $\frac{DB}{AB} = \frac{DE}{AC} = \frac{15}{24} = \frac{5}{8}$.

Answer: (b) $DE = 15$ cm (c) $DB : AB = 5 : 8$

8. Chords AD and BC of a circle intersect at P. $AB = 9$ cm, $PA = 7.5$ cm and $PC = 5$ cm. (a) Prove that $\triangle PAB \sim \triangle PCD$. (b) Find CD. (c) Find area of $\triangle PAB$: area of $\triangle PCD$. ICSE 2020, 3 marks

SOLUTION

(a) $\angle APB = \angle CPD$ (vertically opposite) and $\angle PAB = \angle PCD$ (angles in the same segment, standing on the arc BD). So $\triangle PAB \sim \triangle PCD$ (AA).

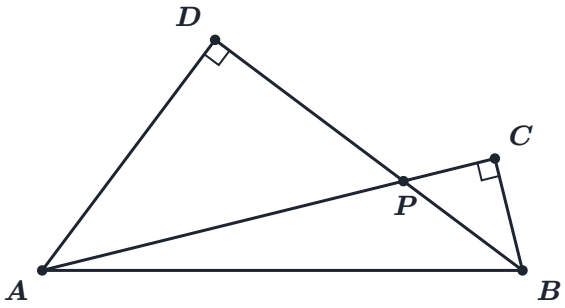

(b) $\frac{AB}{CD} = \frac{PA}{PC}$, so $CD = \frac{9 \times 5}{7.5} = 6$ cm.

(c) Ratio of areas $= \left(\frac{PA}{PC}\right)^2 = \left(\frac{7.5}{5}\right)^2 = \frac{9}{4}$

Answer: (b) $CD = 6$ cm (c) $9 : 4$

4 Areas of similar triangles

9. $\triangle ADB$ and $\triangle ACB$ are right-angled at D and C, on the same side of AB, and AC meets BD at P. $AB = 10$ cm, $AD = 6$ cm, $BC = 2.4$ cm and $DP = 4.5$ cm. (a) Prove that $\triangle APD \sim \triangle BPC$. (b) Find BD and PB. (c) Hence find PA. (d) Find area of $\triangle APD$: area of $\triangle BPC$. ICSE 2024, 4 marks

SOLUTION

(a) $\angle ADP = \angle BCP = 90^\circ$ and $\angle APD = \angle BPC$ (vertically opposite). So $\triangle APD \sim \triangle BPC$ (AA).

(b) In $\triangle ADB$: $BD = \sqrt{10^2 - 6^2} = 8$ cm. $PB = BD - DP = 8 - 4.5 = 3.5$ cm.

(c) From the similar triangles, $\frac{PA}{PB} = \frac{AD}{BC} = \frac{6}{2.4} = 2.5$, so $PA = 2.5 \times 3.5 = 8.75$ cm.

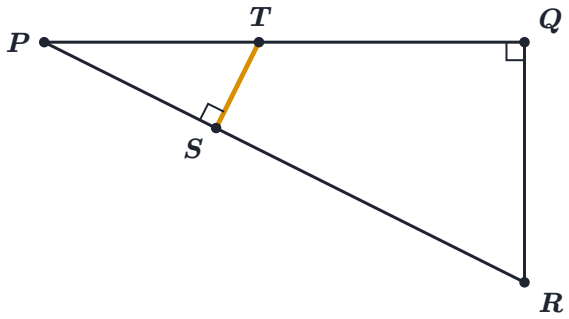

(d) Ratio of areas $= \left(\frac{AD}{BC}\right)^2 = (2.5)^2 = \frac{25}{4}$

Answer: (b) $BD = 8$ **cm,** $PB = 3.5$ **cm (c)** $PA = 8.75$ **cm (d)** $25 : 4$

Note: the measurements in this question do not fit together exactly (the Pythagoras theorem in $\triangle ADP$ would give $PA = 7.5$ cm). The word "hence" tells you to use the similar triangles, as done here.

10. In $\triangle PQR$, $\angle PQR = 90^\circ$. T is a point on PQ and S is a point on PR with $\angle PST = 90^\circ$. $PQ = 5$ cm and $PS = 2$ cm. (a) Prove that $\triangle PQR \sim \triangle PST$. (b) Find area of $\triangle PQR$: area of quadrilateral $SRQT$.

ICSE 2019, 3 marks

SOLUTION

(a) $\angle P$ is common and $\angle PQR = \angle PST = 90^\circ$. So $\triangle PQR \sim \triangle PST$ (AA).

(b) $$\frac{\text{area of } \triangle PQR}{\text{area of } \triangle PST} = \left(\frac{PQ}{PS}\right)^2 = \frac{25}{4}$$

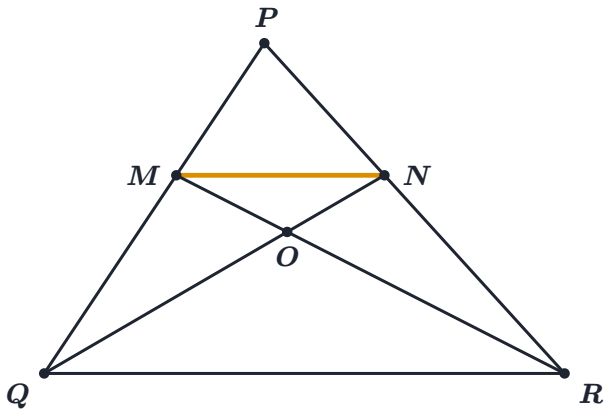

If the area of $\triangle PQR$ is 25 parts, the area of $\triangle PST$ is 4 parts and the quadrilateral $SRQT$ is $25 - 4 = 21$ parts.

Answer: $25 : 21$

MathSetu

11. In $\triangle PQR$, M lies on PQ and N lies on PR with $MN \parallel QR$ and $\frac{PM}{MQ} = \frac{2}{3}$. MR and NQ meet at O. (a) Find $\frac{MN}{QR}$. (b) Prove that $\triangle OMN \sim \triangle ORQ$. (c) Find area of $\triangle OMN$: area of $\triangle ORQ$.

ICSE 2018, 3 marks

SOLUTION

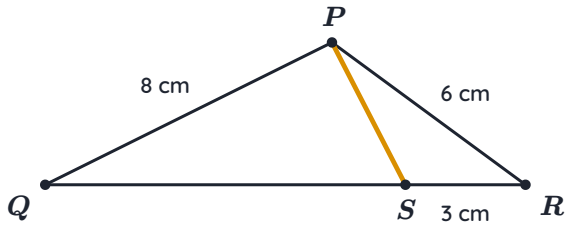

(a) $\triangle PMN \sim \triangle PQR$ (AA, because $MN \parallel QR$), so $\frac{MN}{QR} = \frac{PM}{PQ} = \frac{2}{2+3} = \frac{2}{5}$.

(b) $\angle MON = \angle ROQ$ (vertically opposite) and $\angle OMN = \angle ORQ$ (alternate angles). So $\triangle OMN \sim \triangle ORQ$ (AA).

(c) Ratio of areas $= \left(\frac{MN}{QR}\right)^2 = \frac{4}{25}$

Answer: (a) $\frac{2}{5}$ (c) $4 : 25$

12. S is a point on the side QR of $\triangle PQR$ with $\angle PSR = \angle QPR$. $QP = 8$ cm, $PR = 6$ cm and $SR = 3$ cm. (a) Prove that $\triangle PQR \sim \triangle SPR$. (b) Find QR and PS. (c) Find $\frac{\text{area of } \triangle PQR}{\text{area of } \triangle SPR}$. ICSE 2017, 3 marks

SOLUTION

(a) $\angle R$ is common and $\angle QPR = \angle PSR$ (given). So $\triangle PQR \sim \triangle SPR$ (AA).

(b) $\frac{PQ}{SP} = \frac{QR}{PR} = \frac{PR}{SR} = \frac{6}{3} = 2$. So $QR = 2 \times 6 = 12$ cm and $PS = \frac{8}{2} = 4$ cm.

(c) Ratio of areas $= 2^2 = 4$

Answer: (b) $QR = 12$ cm, $PS = 4$ cm (c) 4

5 Basic proportionality theorem

13. In $\triangle PAB$, C is a point on PA and D is a point on PB with $\angle BAP = \angle DCP = 70^\circ$. If $PC = 6$ cm and $CA = 4$ cm, find $PD : DB$. (a) $5 : 3$ (b) $3 : 5$ (c) $3 : 2$ (d) $2 : 3$ ICSE 2023, 1 mark

SOLUTION

The equal angles are corresponding angles, so $CD \parallel AB$.

By the basic proportionality theorem, $\frac{PD}{DB} = \frac{PC}{CA} = \frac{6}{4} = \frac{3}{2}$.

Answer: (c)

These questions are based on questions asked in past board examinations. They have been reworded by MathSetu, the figures are redrawn, and the solutions are MathSetu's own. MathSetu is an independent study resource and is not affiliated with or endorsed by CBSE, CISCE, NCERT or any publisher.
