Chapter 11: Algebraic Expressions

Every formula and result of the chapter on one sheet

1	Like terms	Same variables with the same powers
2	Adding like terms	$ax^n + bx^n = (a+b)x^n$
3	Subtraction	Change every sign of the subtrahend and add
4	Product of powers	$x^m \times x^n = x^{m+n}$
5	Quotient of powers	$x^m \div x^n = x^{m-n}$
6	Monomial times polynomial	$a(b+c) = ab + ac$
7	Binomial times binomial	$(a+b)(c+d) = ac + ad + bc + bd$
8	Polynomial by monomial	Divide each term
9	Division check	Dividend $=$ Divisor $\times$ Quotient $+$ Remainder
10	Degree	Highest sum of powers in a term
11	Minus before a bracket	$-(a-b) = -a + b$
12	Order of brackets	Bar, ( ), { }, [ ]
