Chapter 12: Mid-point and Its Converse

Daily practice problems: 10 questions with an answer key

Try every question on your own first. The answer key is on the last page.

1. In triangle ABC, P and Q are the mid-points of AB and AC. If $PQ = 6.5$ cm, find BC.

2. In triangle ABC, D is the mid-point of AB and $DE \parallel BC$ meets AC at E. If $AE = 3.5$ cm, find AC.

3. The sides of a triangle are 7 cm, 9 cm and 12 cm. Find the perimeter of the triangle formed by the mid-points of its sides.

4. The area of a triangle is 48 sq cm. Find the area of the triangle formed by joining the mid-points of its sides.

5. The diagonals of a quadrilateral are 12 cm and 9 cm. Find the perimeter of its mid-point figure.

6. What figure is formed by joining the mid-points of the sides of a rectangle?

7. In trapezium PQRS, $PQ \parallel SR$, $PQ = 22$ cm, $SR = 14$ cm. Find the length of the segment joining the mid-points of PS and QR.

8. In the trapezium above, find the distance between the mid-points of the diagonals.

9. In triangle ABC, $\angle B = 90^\circ$, $AB = 6$ cm, $BC = 8$ cm. D and E are the mid-points of AB and AC. Find DE and $\angle ADE$.

10. Three parallel lines make intercepts of 2.5 cm each on one transversal. If the first intercept on another transversal is 3.2 cm, find the second.

Answer Key

1. 13 cm
2. 7 cm
3. 14 cm
4. 12 sq cm
5. 21 cm
6. A rhombus
7. 18 cm
8. 4 cm
9. $DE = 4$ cm, $\angle ADE = 90^\circ$
10. 3.2 cm
