Chapter 5: Quadratic Equations

Step-by-step solutions to the previous year questions

The question numbers match the PYQ question sheet.

1 The quadratic formula

1. Solve $2x^2 - 5x - 4 = 0$, giving the answers correct to three significant figures. **ICSE 2025, 4 marks**

SOLUTION

$$a = 2, b = -5, c = -4. D = 25 + 32 = 57 \text{ and } \sqrt{57} \approx 7.550.$$

$$x = \frac{5 \pm 7.550}{4}, \text{ so } x = \frac{12.550}{4} = 3.1375 \text{ or } x = \frac{-2.550}{4} = -0.6375$$

Answer: $x = 3.14$ or $x = -0.637$ (using $\sqrt{57} = 7.5498$, the second root is -0.63746)

2 Nature of the roots

2. The equation $3x^2 + \sqrt{7}x + 2 = 0$ has: (a) two equal real roots (b) two distinct real roots (c) more than two real roots (d) no real roots **ICSE 2025, 1 mark**

SOLUTION

$$D = b^2 - 4ac = 7 - 24 = -17, \text{ which is negative.}$$

Answer: (d)

These questions are based on questions asked in past board examinations. They have been reworded by MathSetu, the figures are redrawn, and the solutions are MathSetu's own. MathSetu is an independent study resource and is not affiliated with or endorsed by CBSE, CISCE, NCERT or any publisher.
