CLASS 10 · CBSE · NCERT MATHEMATICS · PYQ

Chapter 9: Some Applications of Trigonometry

Previous year board questions, topic-wise: 16 questions

The tag after each question gives the board examination year and the marks. Solutions are in a separate PDF with the same question numbers.

1 One right-angled triangle

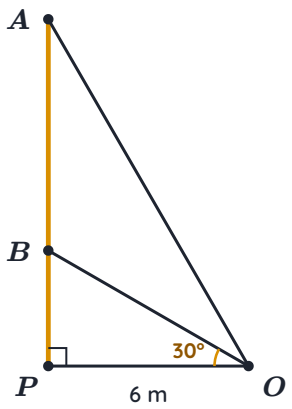

1. A car drives away from the foot of a tower 30 m high. What is the angle of elevation of the top of the tower from the car when it is $10\sqrt{3}$ m from the foot? (a) 30° (b) 45° (c) 90° (d) 60° CBSE 2026, 1 mark

2. A kite is flying 150 m above the ground. Its string is straight and makes an angle of 30° with the ground. How long is the string? CBSE 2025, 1 mark

3. A ladder leaning against a wall makes an angle of 60° with the ground. Its foot is 2.5 m from the wall. Find the length of the ladder. CBSE 2016, 1 mark

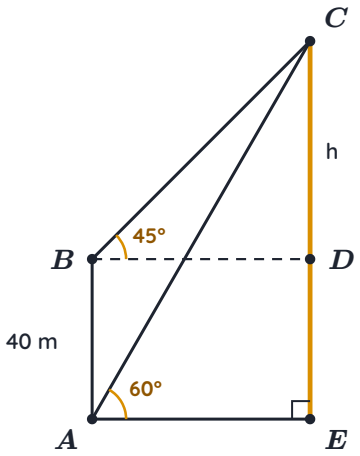

2 Two right-angled triangles

4. A radio tower PA is built in two sections: PB is the lower section and BA the upper one. Wires from a point O on the ground, 6 m from the foot P, hold the tower at B and at A. From O the angle of elevation of B is 30° and that of A is 60°. (i) Find the length of the wire OB. (ii) Find the length of the wire OA. (iii) Find AB, OR find the area of $\triangle OPB$. CBSE 2026, 4 marks

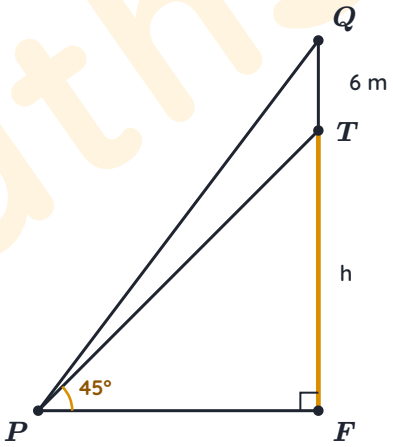

Angle POB = 30° and angle POA = 60°

5. From a point A on the ground, the top C of a lighthouse CE is seen at an angle of elevation of 60°. From a deck at B, 40 m directly above A, the angle of elevation of C is 45°. D is the point on CE level with B, and $CD = h$ metres. (i) Write BD in terms of h. (ii) Write BC in terms of h. (iii) Find the height CE, taking $\sqrt{3} = 1.73$, OR find AE if $AC = 100$ m. CBSE 2025, 4 marks

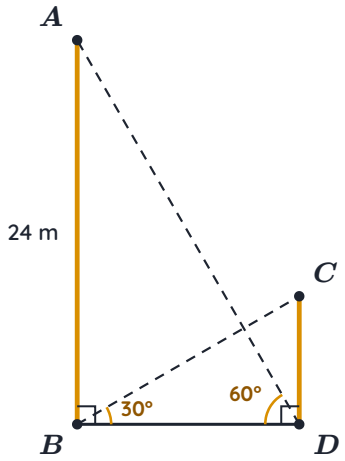

6. A 6 m pole stands on top of a tower. From a point P on the ground, the top of the pole is seen at an angle of elevation of 60°. From the top of the tower, P is seen at an angle of depression of 45°. Find the height of the tower and the distance of P from its foot. (Take $\sqrt{3} = 1.73$.)

CBSE 2024, 5 marks

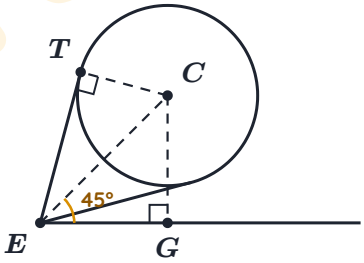

FT is the tower and TQ is the pole

7. Two towers stand on level ground. The first is 24 m high, and from the foot of the second tower its top is seen at an angle of elevation of $60°$. From the foot of the first tower, the top of the second is seen at an angle of elevation of $30°$. Find the distance between the towers, the height of the second tower, and the length of a wire joining the two tops. CBSE 2023, 5 marks

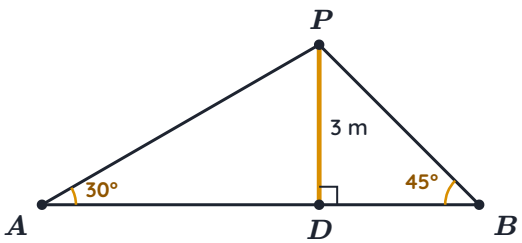

8. A spherical balloon of radius r subtends an angle of $60°$ at the eye of an observer, and the angle of elevation of its centre from the eye is $45°$. Prove that the centre of the balloon is at a height of $\sqrt{2}\,r$. CBSE 2023, 5 marks

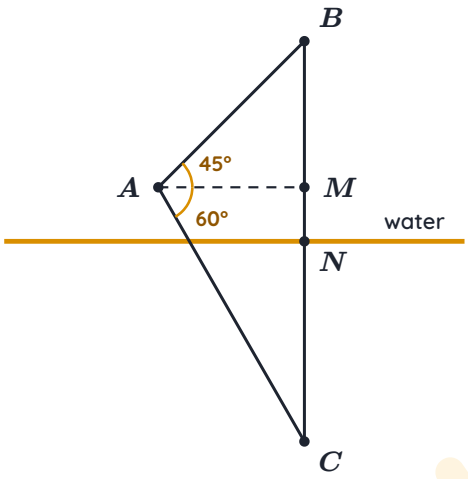

9. A tower is 50 m high. From the foot of a building, the top of the tower is seen at an angle of elevation of $60°$. From the foot of the tower, the top of the building is seen at an angle of elevation of $30°$. Find the height of the building. CBSE 2022 Term 2, 3 marks

10. From a point on a bridge 3 m above the banks of a river, the two banks on opposite sides are seen at angles of depression of $30°$ and $45°$. Find the width of the river. CBSE 2022 Term 2, 3 marks

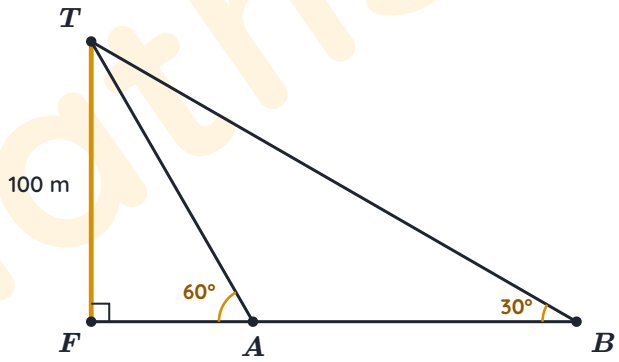

MathSetu

11. The top B of a pavilion standing in a lake is 10 m above the water. From a point A, h metres above the water, the angle of elevation of B is 45° and the angle of depression of the reflection C of B in the water is 60°. (i) Draw a labelled figure. (ii) Find h, taking $\sqrt{3} = 1.73$. CBSE 2022 Term 2, 4 marks

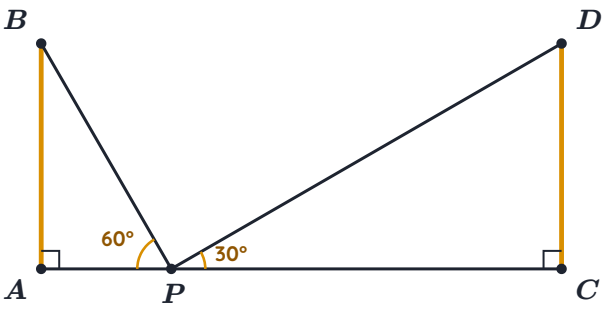

N is on the water surface, with BN = NC = 10 m

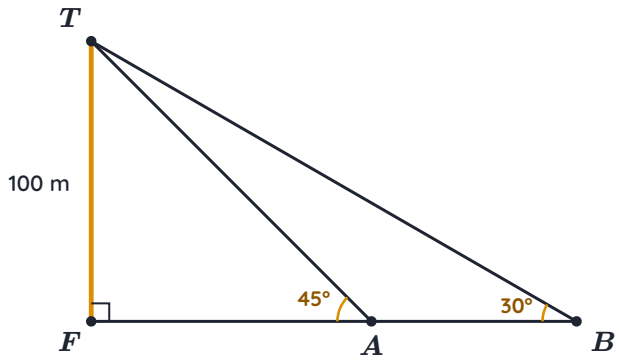

12. A man rows a boat directly away from a lighthouse 100 m high. In 2 minutes the angle of elevation of the top of the lighthouse changes from 60° to 30°. Find the speed of the boat in metres per minute. Take $\sqrt{3} = 1.732$. CBSE 2019, 4 marks

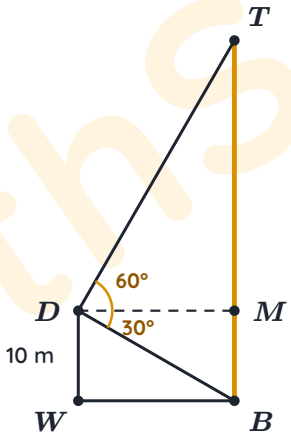

13. Two poles of equal height stand opposite each other on the two sides of a road 80 m wide. From a point on the road between them, the tops of the poles are seen at angles of elevation of 60° and 30°. Find the height of the poles and the distances of the point from them. CBSE 2019, 4 marks

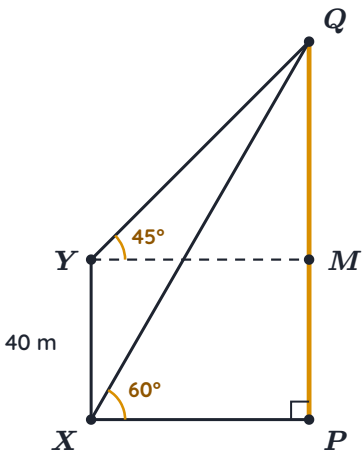

14. From the top of a lighthouse 100 m above sea level, two ships are seen at angles of depression of 30° and 45°. One ship is directly behind the other on the same side of the lighthouse. Find the distance between the ships. Take $\sqrt{3} = 1.732$. CBSE 2018, 4 marks

15. A man stands on the deck of a ship, 10 m above the water. He sees the top of a hill at an angle of elevation of 60° and the foot of the hill at an angle of depression of 30°. Find the distance of the hill from the ship and the height of the hill. CBSE 2016, 3 marks

16. The top Q of a vertical tower PQ is seen at an angle of elevation of 60° from a point X on the ground. From a point Y, 40 m vertically above X, the angle of elevation of Q is 45°. Find the height PQ and the distance PX. Take $\sqrt{3} = 1.73$. CBSE 2016, 4 marks

MathSetu

These questions are based on questions asked in past board examinations. They have been reworded by MathSetu, the figures are redrawn, and the solutions are MathSetu's own. MathSetu is an independent study resource and is not affiliated with or endorsed by CBSE, CISCE, NCERT or any publisher.
