Chapter 2: Banking (Recurring Deposit Accounts)

Every formula and result of the chapter on one sheet

1	Interest on a recurring deposit	$I = P \times \frac{n(n+1)}{2 \times 12} \times \frac{r}{100}$
2	Total amount deposited	$P \times n$
3	Maturity value	$\text{M.V.} = P \times n + I$
4	Maturity value in one step	$\text{M.V.} = P\left[n + \frac{n(n+1)}{2400}\, r\right]$
5	Interest from the maturity value	$I = \text{M.V.} - P \times n$
6	Monthly deposit	P, in rupees per month
7	Time	n, always in months
8	Rate	$r\%$ per annum
9	Equivalent principal for one month	$P \times \frac{n(n+1)}{2}$
