Chapter 17: Circles

Every formula and result of the chapter on one sheet

1	Angle at the centre	$\angle AOB = 2\angle ACB$ (same arc)
2	Angles in the same segment	Equal
3	Angle in a semicircle	90°
4	Opposite angles of a cyclic quadrilateral	$\angle A + \angle C = 180^\circ$ and $\angle B + \angle D = 180^\circ$
5	Exterior angle of a cyclic quadrilateral	Equal to the interior opposite angle
6	Point on the minor arc	$\angle ACB = \frac{1}{2}(360^\circ - \angle AOB)$
7	Triangle formed by two radii	Isosceles: the base angles are equal
8	Equal chords	Equal angles at the centre; equal arcs
9	Equal arcs	Equal angles at the centre and at the circumference
10	Cyclic parallelogram	A rectangle
11	Cyclic trapezium	Isosceles, with equal diagonals
