CLASS 10 · CBSE · NCERT MATHEMATICS · FORMULA BANK

Chapter 6: Triangles

Every formula and result of the chapter on one sheet

1	Similar triangles	Corresponding angles equal and corresponding sides in the same ratio
2	Ratio of corresponding sides	If $\triangle ABC \sim \triangle DEF$: $\frac{AB}{DE} = \frac{BC}{EF} = \frac{CA}{FD}$
3	Basic Proportionality Theorem	If $DE \parallel BC$: $\frac{AD}{DB} = \frac{AE}{EC}$
4	Other forms of the theorem	$\frac{AD}{AB} = \frac{AE}{AC} = \frac{DE}{BC}$
5	Converse of the theorem	If $\frac{AD}{DB} = \frac{AE}{EC}$, then $DE \parallel BC$
6	AA (AAA) criterion	Two pairs of corresponding angles equal
7	SSS criterion	All three pairs of corresponding sides in the same ratio
8	SAS criterion	One pair of angles equal and the sides including them in the same ratio
9	Ratio of perimeters	Equal to the ratio of corresponding sides
10	Ratio of altitudes and medians	Equal to the ratio of corresponding sides
11	Shadows at the same time	$\frac{\text{height}_1}{\text{shadow}_1} = \frac{\text{height}_2}{\text{shadow}_2}$
12	Mid-point theorem	The line joining the mid-points of two sides is parallel to the third side and half of it
