Chapter 2: Compound Interest (Without Using Formula)

Every formula and result of the chapter on one sheet

1	Simple interest	$\frac{P \times R \times T}{100}$
2	Amount	$P+$ interest
3	Interest for one year	$\frac{P \times R}{100}$
4	Principal for the next year	Amount at the end of this year
5	Compound interest	Final amount $-$ original principal
6	First year	C.I. $=$ S.I.
7	Rate from successive interests	$\frac{\text{difference of C.I. of successive years}}{\text{C.I. of the earlier year}} \times 100$
8	Rate from successive amounts	$\frac{\text{difference of the amounts}}{\text{earlier amount}} \times 100$
9	C.I. $-$ S.I. for 2 years	Interest for one year on the first year's interest
10	Half-yearly compounding	Rate $\frac{R}{2}\%$ per half-year, $2T$ periods
11	After a repayment	New principal $=$ amount $-$ repayment
12	Depreciation	New value $=$ old value $-$ year's decrease
